(54) MANUFACTURE OF METAL HONEYCOMB

(57)Abstract:

PROBLEM TO BE SOLVED: To suppress carburization, to prevent brittleness, high-temperature oxidation, intergranular corrosion, etc., of the base metal, and to facilitate the cleaning and removal of a releasing agent when a base metal is stainless steel, and to facilitate the cleaning and removal of a releasing agent, to surely break and diffuse an oxide film, and to smoothly achieve the diffusion bonding even when the base metal is aluminum.

SOLUTION: In a manufacturing method of a metal honeycomb of expansion type, a releasing agent 1 applied to a base metal 2 of stainless steel and an aluminum alloy while leaving a base metal 5 in strip contains, by weight, $\geq 5\%$ to $\leq 60\%$ ceramic powder of $\leq 5 \mu\text{m}$ in grain size, $\geq 1\%$ to $\leq 40\%$ binder consisting of polyvinyl resin dissoluble in a solvent, and the solvent. In addition, a partially saponified polyvinyl resin and an oxide of 3A group element are preferably used for the binder, and the ceramic powder, respectively.
